

# ENCOMPASS

CONTROLLED RELEASE FERTILIZER

# PRO 38

**Encompass™ PRO 38** is a controlled release fertilizer that has been specifically designed for optimum performance in cool climates.

Developed using a specialized sulphur and polymer coating technology combined with decades of turf science experience, Encompass™ provides a dependable, consistent and balance source of nitrogen to turf grass.

Whether it's a golf course fairway or sport field application, the unique coating technology releases nitrogen as soil activity stimulates turf growth, fulfilling the needs of the turf.

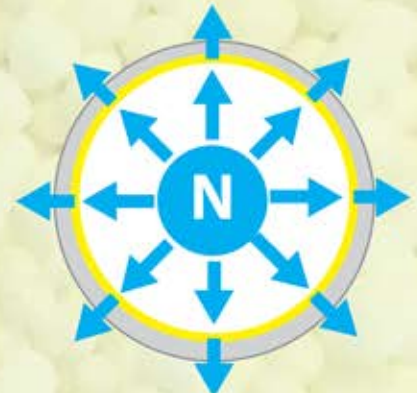

## How Does It Work?

Soil moisture begins to penetrate the sulphur and polymer coatings.

Encapsulated nutrient begin to dissolve which produces pressure within the granule.

The dual sulphur and polymer layers results in a consistent and dependable release profile.

## Product Benefits

- Unique coating technology specifically designed for cool climates.
- Coating technology which ensures excellent spreadability.
- Provides dependable, consistent and balance supply of nitrogen.
- Reduces the potential of nitrogen loss to the environment.
- A dust-free uniformly sized particle to ensure even coverage.
- Durable coating that protects nitrogen in the turf.
- Year round testing to ensure the highest level of product performance.
- Quick green up coupled with extended feeding, provides a cost effective solution for fertility programs.
